

UNIVERSITY OF WISCONSIN-RIVER FALLS

DoTS Web Help

Include an existing text element on a different page using XML

1. On the originating page, turn the text block element into XML feed
 - a. Select element >More>Manage XML Publications

- b. Choose “add XML Publication”
 - c. Complete Name (no spaces) and Description
 - d. Publication Definition: Select “*detailed syndication*” and check detailed
 - e. “Next” then “Save”
2. Manage XML Publications
 - a. Click the “detailed” link next to the XML icon

- b. the XML page will be revealed

3. Copy the new URL.

Example:

<http://www-auth.uwrf.edu/Admissions/PayingForCollege.cfm?xml=Paying%20for%20college,detailed>

4. Visit the destination page where the XML will be included

5. From the Miscellaneous elements section, add the XML Reader element (An error message will appear, that's OK)

6. Click the element and define the data for the custom element

7. Paste XML URL into the field

8. Submit page

The shared content should be revealed.
