South Fork Suites Temperatures

South Fork Suite temperatures are controlled by this thermostat in every kitchen area. The blower fan operates whenever there is a demand for heat or cooling and the outside air temperature shows a need for it. The fan will turn off when the room temperature setting is reached. The maximum heat setting is 72 degrees. You may set it lower than that. The lowest cooling setting is 76 degrees. You may set it higher than that. The fan will not operate between 72 and 76 degrees. It blows air into every room of your suite at the same temperature so you must agree on one setting for the entire suite.
