American College Health Association
National College Health Assessment

University of Wisconsin-River Falls
Spring 2000, 2003, and 2006
American College Health Association (ACHA)

Mission: The American College Health Association (ACHA) will be the principal advocate and leadership organization for college and university health. The association will provide advocacy, education, communications, products and services, as well as promote research and culturally competent practices to enhance its members' ability to advance the health of all students and the campus community.
ACHA National College Health Assessment (NCHA)

- ACHA has created a national database and provides individualized data sets and results back to participating Institutions of Higher Education.
- Goal: To create a college-appropriate health instrument to collect local and national data about risk and protective behaviors, perceived norms, and incidence and prevalence of a variety of health problems and conditions which may affect academic performance, retention, and campus life.
ACHA NCHA

- Takes approximately 30 minutes to take and consists of 58 questions relating to:
  - General health
  - Health education and safety
  - Alcohol, tobacco, and other drugs
  - Sexual behavior and contraception
  - Health related perceptions
  - Mental and physical health
  - Body image, nutrition, and exercise
  - Impediments to academic performance
  - Demographic data
ACHA NCHA

- Results to help individual institutions in:
  - Generating incidence rates for a variety of students’ health behaviors and perceptions
  - Program planning
  - Prioritizing campus needs
  - Allocating resources
  - Designing programs or strategies for intervention
  - Identifying protective and risk factors associated with academic performance
  - Measuring progress on goals
ACHA NCHA at UW-River Falls

- The American College Health Association National College Health Assessment was administered to 421 UW-RF students in 2000 and 498 students in 2003 via random mailed survey. The survey yielded 408 usable mail surveys with a response rate of 30% in 2000 and 498 usable mail surveys with a response rate of 35.6% in 2003.

- Administered in the Spring of 2006 via on-line survey to 3000 randomly selected UW-RF students and yielded 705 usable web surveys with a response rate of 23.5% (Incentives offered but campus e-mail down during administration).

- National reference data available for all three administrations.

</tr>
</tbody>
</table>

**Body Mass Index Values**

- "Ideal" below 25
- "Overweight" 25-29
- "Obese" >30

**BMI formula**

\[ BMI = \frac{703 \times \text{weight (lbs)}}{\text{height (in)}^2} \]

BMI stands for **Body Mass Index**. It is a number that shows body weight adjusted for height.

**BMI is not the only indicator of health risk.**

BMI is just one of many factors related to developing a chronic disease (such as heart disease, cancer, or diabetes).
